Clumped-isotope reordering limit on Neoproterozoic burial (AMF6 vein calcite; Passey & Henkes 2012 kinetics)
slow exhumation
(peak 980 Ma, cool to 505 Ma)
rapid exhumation
(hold 950-750 Ma, exhumed by 700 Ma)
modeled apparent Δ47 temperature, present day (°C)
peak Neoproterozoic burial temperature (°C)
measured Δ47 T = 54.4 ± 1.7 °C
(Hodgin et al., 2024)
